Re: Data Center Refresh Purchase

Background:

Servers typically last about five years. We are approaching the five year mark for our data center. This purchase will replace our existing data center that runs all critical servers and virtual machines in SLUSD.

Description:

Obtain approval to spend up to $188,837.31 for our new data center. The vendor will be Dell EMC Corporation, with funding coming from Measure J1 Bond Funds. The purchasing vehicle we will be using is the NASPO Piggyback Contract.
